Role Mission

As a software engineer trainee you will be part of a team in charge of anylizing data coming from differente sources and clients in real time. You will have to actually use all you have learnd in Maths classes to structure, optimize and upload the data into the platform, mainly with python. You will also create dynamic dashboards to be able to visualize that data with JavaScript and HTML.

What will you do

- Develop front-end applications on JavaScript, using internal framework to visualize dashboards.

- Develop source parsers to be able to query and analyse data sources.

- Give support to create framework documentation.

- Solve complex problems regarding data,

- Deal with large files, seeing the best strategy to get the necessary information

What we need from you

- Be in your last year of College or Master's related to IT (Maths, Engineering, Physics, Telecommunications. Etc)

- Willingness to learn, being resilent, proactive and hunger for new knowledge

- Commitment to be 5 hours a day flexible between 8h and 18h

We enjoy looking at code samples. Please include links to your live projects, github code, etc.

What we offer

Work with a Big Data solution, which is not based on existing tools or frameworks, developed entirely in the company

We provides job security, appropriate working conditions, a competitive salary in recognition of work, efficient organizational structure as well as a training and motivational system for employees

Ongoing opportunities to improve technology skills

Our old employees look after new recruits to help them fit in, which makes work much more effective.

Flexible work hours in a focused but casual environment and an international team.
