Telecom Testing

Internship description

Our offer

We are looking for Engineers to join our team of Core Network Testing in Madrid (Spain) responsible for certifying the new 5G and NFV networks and services to be deployed by Communication Service Providers and Wireless Operators.

You will learn and practice

• Design of test strategies and test suites.

• Programming of test suites.

• Run validation test and report generation.

• Generation of Testing Manual documentation (in English)

Your profile

• Knowledge of LTE and IMS architectures, and network protocols such as SIP and Diameter.

• Skills in programming and at least knowledge of Python.

• Skills in troubleshooting with Wireshark.

• Knowledge of testing methodologies and automation tools (Robot, Jenkins)

• Knowledge of OpenStack or VMware.

• Good level of English and Spanish, both spoken and written.

• Good communication skills and excellent teamwork.

• Background: Student of Bachelor's degree in Telecom Engineering.
