

Front-End/Mobile Software Developers

Motivait is an international company that designs, develops and manages Digital Engagement Solutions for large/medium sized organisations across Europe. Our talented and multidisciplinary team is made up of innovative, creative and diverse professionals with a shared passion to design and develop solutions that make a real difference for our clients.

We are looking for **Front-End/Mobile Developers** to join our team. If you love using your skills, creativity, and imagination to develop innovative, reliable and high performing solutions that help clients solve their engagement challenges, this could be the opportunity for you!

“Culturally, we will look for authentic team players who can both contribute and listen to different perspectives, whilst delivering great craftsmanship. Our clients trust us to deliver solutions that are innovative, secure and dependable which means we are always trying to get better at what we do, individually and collectively. We try and live out a flat hierarchy, leave egos behind and create a working environment where we can rely on each other to collaborate and contribute to our maximum”.

The role, with a hybrid working model, is based at our offices in Madrid (Metro: La Moraleja), but you will work with colleagues and clients from across Europe with **responsibilities** that include:

- The design, development, testing and support of mobile applications, web environments and front-end applications working closely with both clients and colleagues.
- The full range of development functions including design, software development, code review, build, automated testing and deployment to ensure the timely delivery of high-quality software in terms of functionality, performance, security and user experience.
- Contributing to effective and timely release management, integration and support of existing and new developments including building reusable modules, components and libraries.
- Being a proactive contributor to innovative thinking and continuous improvement.

We are looking for someone that colleagues would describe as:

- A critical thinker with good problem-solving skills, able to assimilate multiple requirements and who consistently delivers high quality code on time.
- A committed self-starter with a high degree of ownership and accountability and who multitasks effectively, prioritising and resolving issues in a calm and collaborative manner.
- A team player with good listening, communication and analytical skills with a natural ability to develop trusted relationships with clients and colleagues.

With a strong set of required skills and relevant experience:

- Minimum of 2 years front-end experience developing mobile or web applications with a strong understanding of user-centric design principles, demonstrable attention to detail, and a proven ability to assimilate multiple product requirements.
- Working knowledge of HTML5, CSS3, JavaScript, TypeScript, PHP and responsive design with ability to convert designs from prototype tools such as Adobe XD or Sketch to HTML and CSS.
- Familiarity with Ionic Framework and Cordova.

- Experience with JavaScript frameworks including Angular.
- Knowledge of NodeJS, Express and building REST APIs.
- Familiarity with Bitbucket, Confluence, Jira and Test tools.
- Familiarity with React Native or Flutter would be a real bonus!
- Comfortable working with colleagues in Spanish and English (equivalent to at least B2 level).
