

Telco Testing & Automation

At Mantica Solutions, we sit at the intersection of network testing, lab automation, end-to-end monitoring and network analytics. We have formed deep partnerships with the world's best players, developed a suite of testing services, and built proprietary technology for ensuring IMS based services, zero-rated offers and NFV/VNF/NFVi delivery, optimization and measurement.

We are looking for a Telecommunication Engineer to join our network testing team. In this role you will have the opportunity to participate in challenging projects for certification and quality assurance of technologies such as NFV, IMS and 5G.

Requirements:

University degree Telecommunication, Computer Science, or equivalent demonstrated experience

Good telecom network architecture and protocols skills

Experience with REST API programming

Experience with OpenStack & dockers containers

Experience with Linux systems and Bash scripting

Experience with Wireshark/tcpdump

A proactive, self-starter - someone who can manage their own work and find best solution

Analytic thought and Teamworking

Fluent in English

Beneficial:

- Familiarized with ETSI NFV and OSG-OSM standards
- Willing to travel abroad

Responsibilities:

- Analysis of requirements, design of the proper test strategy, documentation of tech proposals
- Design, implementation, scripting and configuration of tests on test tools / traffic generators
- Execution of test suites, analysis of results and generation of reports
- Set up of PoC, product demos
